

SK 452 heatsink is especially suitable for the use with high-power leds from Luxeon as well as the HKO constant-current sources.

It fits either 1 Watt and 3 Watt types of Luxeon leds and all Types of HKO modules.

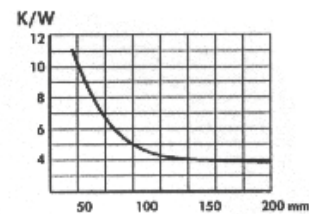

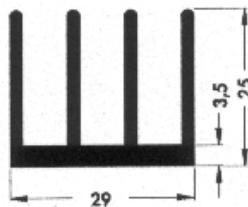

A maximum thermal radiation is achieved by black anodizing

The SK 452 is much cheaper than comparable pin heatsinks in similar dimensions.

Cuttings are available in lengths from 25 mm to 1000 mm, standard size is 25 mm. For assembling of leds and HKO modules we recommend the use of Cooltape thermal adhesive tape.

Technical data:

SK 452

- Material: Aluminium, black anodized
- Thermal resistance: see diagram
- Dimensions: see drawing

Application samples:
